Non-statutory

Y1	Y2	Y3	Y4	Y5	Y6
<p>Measurement</p> <p>The pairs of terms: mass and weight, volume and capacity, are used interchangeably at this stage.</p> <p>Pupils move from using and comparing different types of quantities and measures using non-standard units, including discrete (for example, counting) and continuous (for example, liquid) measurement, to using manageable common standard units.</p> <p>In order to become familiar with standard measures, pupils begin to use measuring tools such as a ruler, weighing scales and containers.</p> <p>Pupils use the language of time, including telling the time throughout the day, first using o'clock and then half past.</p> <p>Compare different times.</p>	<p>Measurement</p> <p>Pupils use standard units of measurement with increasing accuracy, using their knowledge of the number system. They use the appropriate language and record using standard abbreviations.</p> <p>Measure and draw lines.</p> <p>Comparing measures includes simple multiples such as 'half as high'; 'twice as wide'. Solve problems on volume. Read a thermometer. Measure and write down the temperature.</p> <p>They become fluent in telling the time on analogue clocks and recording it. Find the duration of time. Find the starting or ending time.</p> <p>Pupils become fluent in counting and recognising coins. They read and say amounts of money confidently and use the symbols £ and p accurately, recording pounds and pence separately. Solve word problems in all</p>	<p>Measurement</p> <p>Pupils continue to measure using the appropriate tools and units, progressing to using a wider range of measures, including comparing and using mixed units (for example, 1 kg and 200g) and simple equivalents of mixed units (for example, 5m = 500cm). Read scales for mass in kg and g. Solve problems on volume and capacity, mass and money. Convert between m & cm to cm, km & m to m and vice versa.</p> <p>The comparison of measures should also include simple scaling by integers (for example, a given quantity or measure is twice as long or five times as high) and this connects to multiplication.</p> <p>Pupils continue to become fluent in recognising the value of coins, by adding and subtracting amounts, including mixed units, and giving change using manageable amounts. They</p>	<p>Measurement</p> <p>Pupils build on their understanding of place value and decimal notation to record metric measures, including money. Round money to the nearest £ and £10 Measure and estimate length, mass, money, time.</p> <p>They use multiplication to convert from larger to smaller units.</p> <p>Perimeter can be expressed algebraically as $2(a + b)$ where a and b are the dimensions in the same unit.</p> <p>Measure and estimate volume. Convert units of volume They relate area to arrays and multiplication.</p> <p>Find the duration, starting time and finishing time.</p>	<p>Measurement</p> <p>Pupils use their knowledge of place value and multiplication and division to convert between standard units. Convert units of volume.</p> <p>Pupils calculate the perimeter of rectangles and related composite shapes, including using the relations of perimeter or area to find unknown lengths. Missing measures questions such as these can be expressed algebraically $4 + 2b = 20$ for a rectangle of sides 2 cm and b cm and perimeter of 20cm.</p> <p>Pupils calculate the area and perimeter from scale drawings using given measurements.</p> <p>Tell the temperature.</p> <p>Pupils use all four operations in problems involving time and money, including conversions (for example, days to weeks, expressing the answer as weeks and days). Read and interpret information in a timetable.</p>	<p>Measurement</p> <p>Pupils connect conversion (for example, from kilometres to miles) to a graphical representation as preparation for understanding linear/proportional graphs.</p> <p>They know approximate conversions and are able to tell if an answer is sensible.</p> <p>Using the number line, pupils use, add and subtract positive and negative integers for measures such as temperature.</p> <p>They relate the area of rectangles to parallelograms and triangles, for example, by dissection, and calculate their areas, understanding and using the formulae (in words or symbols) to do this. Use the area of rectangles, triangles and parallelograms to find the area of other types of polygons.</p> <p>Pupils could be introduced to compound units for speed, such as miles per hour, and apply their knowledge in science or other subjects as</p>

	measures.	<p>record £ and p separately. The decimal recording of money is introduced formally in year 4.</p> <p>Use different ways to show the same amounts of money. Pupils use both analogue and digital 12-hour clocks and record their times. In this way they become fluent in and prepared for using digital 24-hour clocks in year 4. Tell and write time using 'past' and 'to' Find the number of days using a calendar.</p>			appropriate.
